View and Change PLC Data For the Low Cost of \$99.00

Remote Set Point V1.0 is a convenient and easy-to-use software package that allows users of AutomationDirect PLCs to view and change PLC data in real-time.

It is a less-expensive alternative to using a SCADA or HMI package to simply change values without having to go through the PLC's DirectSoft program. By employing its 1-2-3 step user interface, you can quickly read and write memory locations in a matter of minutes.

Benefits

- Quick and Easy Interface
- Cost Effective
- Displays Real-Time Data
- Handles Hex, Real, Number, and Text Data Types

System Requirements

The hardware requirements are Pentium 166 mhz with 32 megabytes of ram and at least 10 megabytes of hard disk space free.

The Server can run on Windows NT, 2000 or XP. The Monitor can run on Windows 98, NT, 2000 or XP.

AutomationDirect H2-ECOM, H4-ECOM, H0-ECOM.

Main Screen for Remote Set Point

The screenshot shows the 'Remote Setpoint TRIAL VERSION' window. It is divided into three steps:

- Step 1:** Select a PLC from the list below. A table lists PLCs with IP Address and Name.
- Step 2:** Modify the memory values. A table shows memory locations (V1000 to V1031) with Type and Value columns.
- Step 3:** Configure and/or write to PLC. Includes configuration options like Display Alias, Display Address, and Display Real-Time Data.
